SUMMARY

Software Engineering graduate with hands-on Python development experience across machine learning and backend projects, advanced SQL/PostgreSQL skills, and professional experience troubleshooting API-based payment systems in production. Comfortable working across the stack — from database design to REST API integration — and quick to pick up new frameworks and languages.

PROFESSIONAL EXPERIENCE

Technical Support Analyst | Payten

Remote | Apr 2025 – Dec 2025

- Monitored payment gateway and API-based Virtual POS systems in production, resolving issues through log analysis, SQL queries, and root-cause investigation.
- Partnered with backend engineering teams to identify performance bottlenecks and improve system stability.
- Authored and maintained technical documentation and troubleshooting guides used across the support team.

Operations Support Specialist | Getron Bilişim Hizmetleri

Remote | Apr 2024 – Apr 2025

- Coordinated cross-functional operational processes and contributed to workflow optimization initiatives.
- Generated operational reports and data-driven insights for stakeholders.

Customer Service & Data Analysis Specialist | Webhelp (Akbank Project) -İzmir | Apr 2023 – Sep 2023

- Analyzed customer feedback and complaint trends, identifying root causes and proposing process improvements

EDUCATION

M.Sc. Software Engineering | İzmir Katip Çelebi University

Feb 2023 – Jun 2025

- Relevant coursework: Object-Oriented Programming, Software Requirements Engineering, Database Systems, Python Programming, Artificial Intelligence Applications.

B.Sc. Molecular Biology and Genetics | Nevşehir Hacı Bektaş Veli University

2019 – 2023

- Coursework in statistical data analysis, research methodology, and experimental data collection/interpretation.

PROJECTS

Customer Support Ticket Prioritization System | Python, NLP, Machine Learning

- Built a text-classification pipeline (TF-IDF, Logistic Regression, Random Forest) to automatically classify and prioritize incoming support tickets.
- Developed a real-time monitoring dashboard in Streamlit to visualize ticket volume and priority trends.

Ticket Analysis Tool | Node.js

- Built a backend service for SLA monitoring and support-ticket analytics, including filtering, aggregation, and reporting endpoints.

SQL Relational Modeling & Analytics | SQL

- Designed normalized relational schemas and wrote advanced analytical queries using CTEs, joins, subqueries, and window functions.

SKILLS

Languages & Concepts: Python, Node.js, Java (basic), OOP, REST API design

Databases: PostgreSQL, Advanced SQL (joins, CTEs, window functions, subqueries), relational schema design

Infrastructure & Tools: Docker, Kubernetes (basic), Git, Graylog (log analysis), Power BI, Streamlit

Domain Exposure: Payment gateways, Virtual POS/API integrations, incident management, root-cause analysis
